

Alexey Grigorev

# Scope before coding

A vague take-home is an engineering problem before it is a coding task.

# The assignment

Build a Telegram bot for investment coaching with safety filtering. Useful idea, but too vague to implement directly.

# First step

Clarify the user, allowed questions, refusal policy, data sources, and smallest useful version.

# Key constraint

For this bot, the design depends on available public market data and a clear no-financial-advice boundary.

# What it shows

A good take-home shows that you can turn an unclear request into a scoped engineering problem.
