

Alexey Grigorev

CLI first

Even if the final agent is a Telegram bot.

The temptation

The assignment says Telegram bot, so it is tempting to start with Telegram.

Start smaller

Use a terminal app to debug the user question, tool calls, data fetches, and final answer.

What to inspect

Check whether the agent calls tools, avoids raw data dumps, gives useful analysis, and respects safety rules.

Then wrap it

After the core loop works, Telegram becomes an interface problem instead of an agent-debugging problem.
