

Alexey Grigorev

Pointless tests

AI agents can generate tests that look useful but check almost nothing.

Bad signal

Tests that check imports, method names, or prompt wording can make a project look safer than it is.

Better signal

For an agent, test behavior: expected tool calls, useful answers, safety boundaries, and stopping conditions.

Why first

Clean tests before cleaning code. Tests are the thing you trust while changing everything else.

Rule

With AI-generated code, reviewing tests is part of owning the system.
