

Alexey Grigorev

You still own the code

Coding agents help, but they do not remove engineering ownership.

Use the tools

AI engineers are increasingly expected to use coding agents for syntax, boilerplate, and platform details.

Keep ownership

You cannot say: the agent implemented it and I have no idea how it works. The system is still yours.

Review and ask

Read what changed. Ask why files exist, where functions are invoked, and which pieces are platform-specific.

Document the path

When the agent finds a working route after failed attempts, save the commands and reasoning so the path is repeatable.
