

Alexey Grigorev

FastAPI to Lambda for SSE

The agent logic stayed similar. The web adapter changed.

What stayed similar

The agent loop, search tool, renderer abstraction, and frontend remained close to the previous version.

What changed

FastAPI was removed. Lambda now receives raw requests and the handler routes method and path manually.

Streaming matters

A normal buffered response is not enough for an agent UI. The browser needs SSE events while the agent is working.

The runtime choice

The workshop used a custom Lambda runtime and Function URL response streaming to keep the UI interactive.
