

Alexey Grigorev

The agent can propose a stack. You still own it.

Technology choice is architecture work, even with coding agents.

Ask for options

After scoping the product, ask the agent for multiple stack choices and trade-offs. Do not let it silently decide.

Choose what you can maintain

I chose Django because I know it well. I can read, review, debug, and operate the generated code faster.

Challenge the proposal

Ask whether a dependency is needed, whether the version is current, whether the MVP can be simpler, and what can be deferred.

Own the consequences

Hosting model, background jobs, APIs, dependencies, and operational complexity remain your responsibility.
