

Alexey Grigorev

Context engineering is repo discipline

Put durable project knowledge where the agent can find it.

Every session needs context

The agent needs project rules, commands, task tracker, workflows, roles, and pointers to important docs.

Use a small root file

AGENTS.md should be a map, not a full manual.
For Claude Code, CLAUDE.md can simply point
to AGENTS.md.

Split focused docs

Put process, testing, UI, API, deployment, PM, engineer, and QA guidance in separate files.

Load only what matters

For each task, the agent can read the relevant docs instead of carrying the whole project manual in every session.

Watch the workshop

A practical context setup for coding agents.
