Workshop: Module 2

Build and Ship an AI-Assisted Full-Stack App I
August 3, 2026 at 6:00 AM PDT

What this covers

How to use AI tools from product spec to deployed full-stack app.

Why it matters

AI can generate frontend or backend code, but full-stack work fails when the parts drift apart.

Main workflow

Turn an app idea into a product spec and acceptance criteria. Use OpenAPI contracts to align frontend and backend work.

What you will leave with

Add tests, Docker, deployment, and CI/CD without losing the workflow.
