# Practical workflow: Module 2

A practical note for Build and Ship an AI-Assisted Full-Stack App

# The problem

AI can generate frontend or backend code, but full-stack work fails when the parts drift apart.

# Control 1

Write acceptance criteria before implementation.

# Control 2

Use OpenAPI as the contract between frontend and backend.

# Control 3

Ask for tests while the implementation is still small.

# Register for the workshop

Build and Ship an AI-Assisted Full-Stack App
