Practical workflow: Course launch

A practical note for AI Dev Tools Zoomcamp
2026 Course Launch

The problem

The new cohort starts with the same question many developers have: how do we use AI tools without losing control of the code we ship?

Control 1

The course is about developer workflow, not collecting tools.

Control 2

The path goes from planning and coding to agent capabilities, security, audit, and DevOps.

Control 3

The final project is where the workflow becomes concrete.
